

Stop dynamic phishing links - every single time

All email security systems have a known vulnerability that hackers easily exploit; Terra Security just received a patent for the *only* technology that eliminates it.

Dynamic phishing links send security analyzers to *safe sites* while sending everyone else to *malicious sites*. **Your security system correctly identifies that it's been sent to a good site, but then it hands your fate back to the phishing link so that it takes you to a malicious site.** If you do not patch this vulnerability, the phishing emails currently reaching your inboxes will inevitably result in a security breach – regardless of the cybersecurity products you're using.

PhishViewer turns the tables on this attack – **stopping it every single time**. When the phishing link tricks PhishViewer into visiting a good site, PhishViewer takes the user straight to that good site (instead of handing control back to the phishing link). Problem solved!

The final site is:

usaa.com

USAA
UNITED STATES

If the final site is who you expect, go straight there. If it's not, close this tab.

Go Straight There
Recommended ([here's why](#))

Go to Original Link
Not Recommended ([here's why](#))

Know Before You Go

Click any site in the path to get more information about it.

effectproportion.com

limitedtie.com

jdoqocy.com

dotomi.com

emjcd.com

usaa.com

PhishViewer shows your employees the final destination of every email link they click. If the final destination is who they expect, it can take them straight there – completely stripping control from the original link.

PhishViewer doesn't try to determine whether or not any of the other sites are good or not. And this is why it works every time. It no longer matters if the other sites are good or not; because your users never connect to them.

PhishViewer is the *only* anti-phishing technology that doesn't hand your user's fate back to the phishing link after analysis is done (US Patent #10,320,746).

Free trials of our PhishViewer Protections Plans are available now at <https://phishviewer.com>.

A safer internet is here. We hope you join us.
